CLEAN WATER FOR LIFE

THE PROBLEM

Staggering Global Statistics

1.3 Billion people lack access to safe drinking water.

2.6 Billion people, including almost 1 billion children live without basic sanitation.

OUR MISSION

To provide simple, safe, strategic and sustainable clean water solutions to the developing world.

OUR PROGRAM

The Water School program begins in schools where children are taught a water purification method called Solar Disinfection (SODIS) as well as sanitation & hygiene basics such as hand-washing and the importance of using latrines. This lifechanging information ensures children and their families have the knowledge they need to prevent disease, stay healthy and access clean water for life!

OUR RESULTS

Since 2007 Water School has given over 400,000 people safe water and improved sanitation, saving the lives of some of the world's most vulnerable people in Kenya, Uganda and Haiti.

"We had so many cases of water related diseases before the Water School program was introduced in our school. Children were very afraid to drink water because they knew it made them sick. Now they have all developed a culture of drinking water and teachers encourage them to drink as much as they want. School absenteeism rates have decreased so much that the overall performance of the school went up, resulting in our school being one of the top performing schools in the district."

Esther Naisiae Munyeri, Teacher and Water School patron at Naro Moru Primary School, Kenya

OUR IMPACT

Water School has made an incredible impact in communities where it has implemented its program. A recently completed independent study in Uganda showed:

86% REDUCTION in dysentery cases in children

67% REDUCTION in diarrhoeal cases in children

23% INCREASE in school attendance

Solar Disinfection

Solar Disinfection or SODIS is an extremely simple and scientifically proven water treatment technology where plastic PET bottles are filled with contaminated water and placed in the sun for a day. The natural power of UV radiation from the sun destroys the disease-causing pathogens, making the water safe for drinking.
